

Achieve
Product Excellence
with

LIPIDAMIDE

*... our range of CDE - cocodiethanolamide... works in many ways,
creates many positive results, in many fields of application.*

If you make
SHAMPOOS
COSMETIC BATHING PREPARATIONS
PASTY AND LIQUID HAND AND SKIN PREPARATIONS
then you can rely on

LIPIDAMIDE

to achieve substantial improvements in the properties of the active washing substances.

LIPIDAMIDE

Influences positively the application properties of liquid and pasty cleansing agents in both cosmetic and technical applications

It is

AN EMULSIFIER

A SOLUBILIZER

A VISCOSITY REGULATOR

LIPIDAMIDE

Improves skin-feel and hair-feel
Improves washing and cleansing actions
Increases resistance to emulsion
Increases solubility of oily components and perfumed bath preparations in surfactant solutions
Increases the foam-boosting effects i.e. the foam-holding properties in high fat loads.

PHYSICAL CHARACTERISTICS

- 1 Lipidamide is a pale yellow liquid, an easily processible alkanolamide with a faint odour.
- 2 In water it forms an opaque to slightly cloudy solutions. In solutions of different classes of surfactants, it is clearly soluble up to relatively high concentrations. It is also easily soluble in lower and higher alcohols.
- 3 Lipidamide is soluble or miscible in fatty oils and fatty esters - cosmetic oil components - depending on the type of oil and on the amount and type of Lipidamide used.
- 4 Lipidamide has the particular characteristic of being able to increase the viscosity of surfactant formulations, especially in combination with fatty alcohol ethersulphates. Very small additions of Lipidamide is often sufficient to improve the thickening effect by common salt.
- 5 In cosmetic preparations Lipidamide is used at up to 5% in relation to the final products. In special cases Lipidamide can be used in higher amounts.

STORAGE

Due to its good keeping-stability, Lipidamide should have a shelf-life of at least one (1) year when stored at temperatures below 30°C in closed containers.
